

CT-changes over time

Early stage 0-4 days GGO, partial crazy paving, lower number of involved lobes

Progressive stage 5-8 days Progressive (5-8 days): Extension of GGO, increased crazy paving pattern

Peak stage 10-13 days Consolidation

Absorption stage ≥ 14 days Gradual resolution

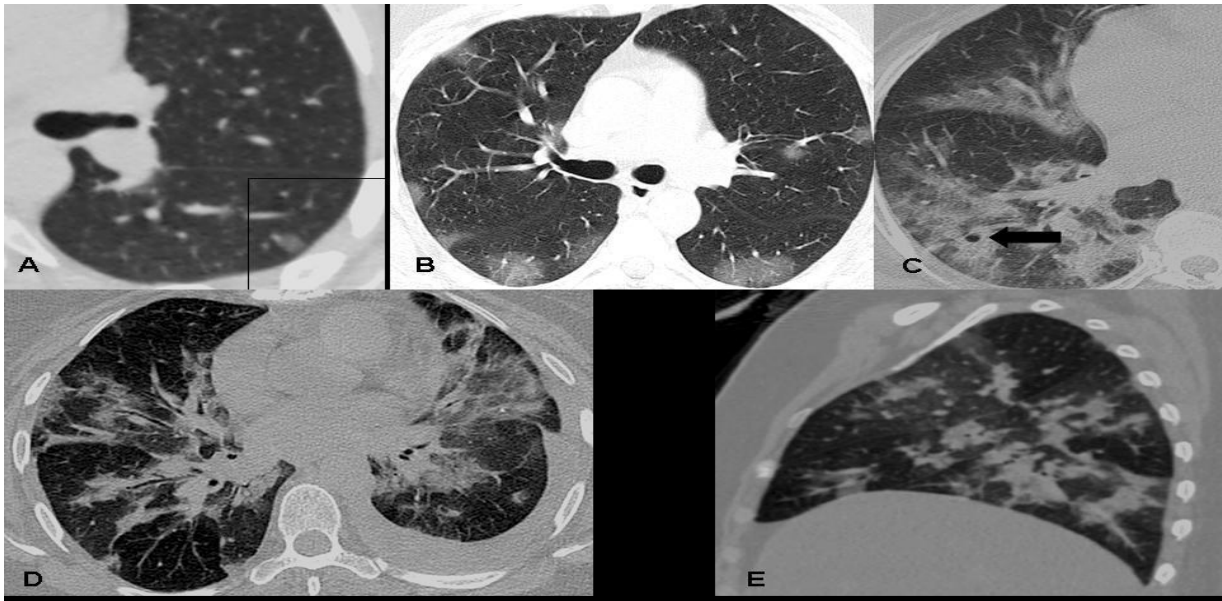

Figure 1: Non-contrast MDCT chest showing variable lesions distribution in the lungs of 5 patients with COVID-19.

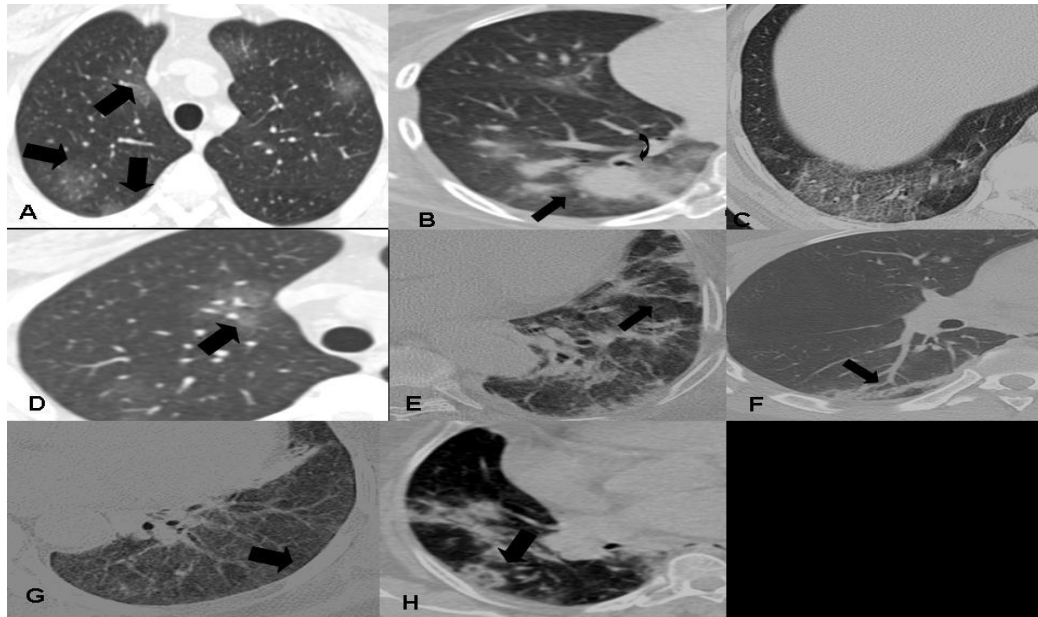

Figure 2: Non-contrast MDCT chest showing patterns of parenchymal lung changes in eight different patients with COVID-19.

Figure 3: Non-contrast MDCT showing bronchial changes in three different patients with COVID-19.

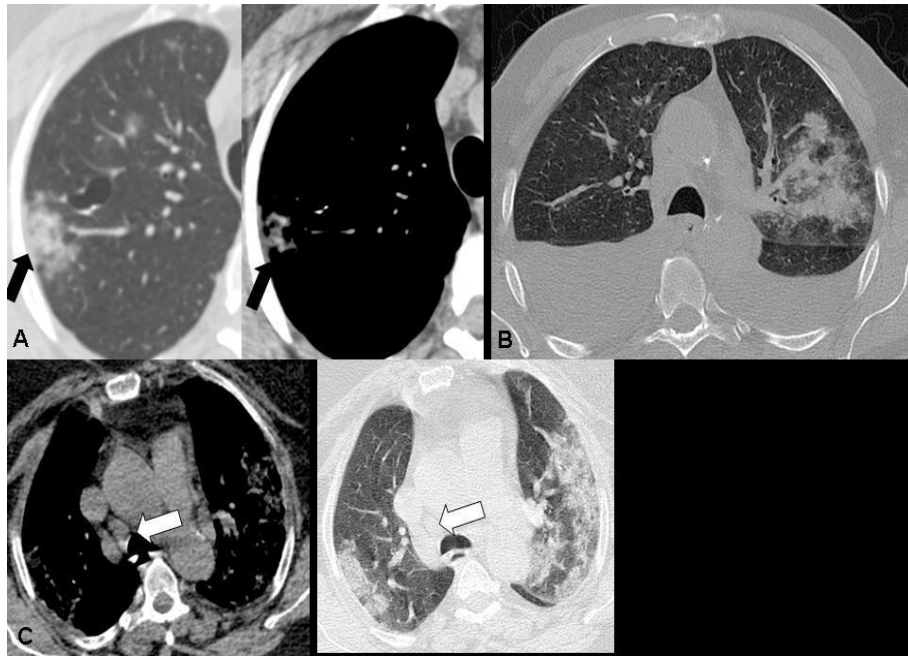

Figure 4: Non-contrast MDCT showing pleu-ral and mediastinal ch-anges in three different patients with COVID-19.
